

MUHAMMAD DANIAL HAQ BIN ROSE MAN

Full-stack Developer | Front-end Developer | Security Engineer

Phone number: (+60)165479925 | Email: danielhaq23@gmail.com | Address: Petaling Jaya, Selangor

LinkedIn: www.linkedin.com/in/danial-roseman

PROFILE

Full Stack Developer with a background in Network Security and a proven track record of engineering scalable, high-availability web applications for nationwide platforms serving over 5,000,000 users. Proficient across JavaScript ecosystems (React.js, Node.js, TypeScript, Vue.js) and PHP frameworks (Laravel, Symfony), with strong expertise in relational databases (PostgreSQL, MySQL). Specializes in real-time feature development, database performance tuning, and secure API design. Demonstrated technical contributor across high-stakes government initiatives, including the Ministry of Education's DELIMa 3.0, DELIMaFLIX, and KEMAS digital portals, delivering end-to-end features from architectural concepts through client requirement engineering to production releases.

PROFESSIONAL EXPERIENCE

Full Stack Developer (Apr 2025-Present)

Cyberjaya, Selangor

MATA Inisiatif Sdn. Bhd.

- Engineered end-to-end web applications using React.js, Node.js, and Express to serve over 1 million monthly active users with high scalability and uptime.
- Architected scalable PostgreSQL database models, executing schema refactoring and index optimizations that reduced query response times by 30%.
- Authored reusable front-end component libraries in TypeScript, standardizing design patterns and increasing team sprint efficiency by 20%.
- Designed and integrated secure RESTful APIs and third-party web services to enable real-time data synchronization across core application features.
- Spearheaded full-lifecycle feature development, taking complex product modules from initial architectural concept through code review to production release.
- Contributed technical insights during client requirement sessions for Ministry of Education (MOE) projects, while leading requirement engineering and feature execution for core modules under KEMAS.
- Performed deep-dive root-cause analysis across front-end and back-end services to diagnose bugs, significantly cutting overall production incident rates.
- Collaborated within Agile/Scrum cross-functional teams—alongside Product Managers, UI/UX designers, and QA engineers—to consistently ship high-quality features on bi-weekly release cycles.

Front-end Developer (Feb-Apr 2025)

Cyberjaya, Selangor

MATA Inisiatif Sdn. Bhd.

- Engineered and deployed core front-end features using Vue.js during initial product rollout, ensuring high UI performance and seamless component integration.
- Diagnosed and resolved critical UI bugs and platform issues to maintain steady system uptime and optimize front-end user experience.
- Facilitated technical briefings and user onboarding sessions, gathering direct client feedback to continuously refine core interface features and usability.

Security Engineer Intern (Aug 2024-Jan 2025)

Petaling Jaya, Selangor

Adaptive Netpoleon Malaysia Sdn. Bhd.

- Resolved post-sales network security tickets for enterprise clients with minimal senior oversight, consistently maintaining strict SLA compliance.
- Provisioned and segmented 50+ network Access Points (APs) across custom subnets for a major Malaysian shopping mall, optimizing traffic isolation and overall network performance.
- Configured and validated staging firewall environments, establishing production-ready templates to streamline enterprise client deployments.
- Executed on-site preventive maintenance audits across municipal government infrastructure (Majlis Perbandaran) to ensure high hardware reliability and system uptime.

PROFESSIONAL EXPERIENCE

Delima 3.0 (Ministry of Education Malaysia)

The official digital learning platform of the Ministry of Education Malaysia (MOE) that gathers educational apps, teaching tools, and learning materials into one system.

- Engineered Ruang Ilmu, a Facebook-style knowledge-sharing module using Symfony, React, and PostgreSQL to serve a nationwide audience of ~5,000,000 users with real-time engagement tracking (views, likes, saves).
- Built a custom digital textbook repository using react-pdf and a pdf-proxy streaming service, enabling page-by-page viewport rendering to eliminate loading latency for massive PDF files.

- Developed a targeted ETL script to parse, map, and validate MOE Excel metadata repositories, populating the database and linking asset paths to Google Cloud Storage (GCS) buckets for dynamic app retrieval.

KEMAS EduCeria (Ministry of Rural and Regional Development)

The official online portal and digital system launched by the Community Development Department (KEMAS) in Malaysia for managing early childhood education programs.

- Architected dynamic backend routing logic mapping teacher assignments to specific premise and class types, automatically serving context-specific activity planners (RPA for Daycare, RPH for Kindergarten, and RPH TTI for Special Needs).
- Maintained and enhanced a location-verified teacher attendance tracking module using the Haversine formula, native browser geolocation, and self-hosted Photon map engine tiles via Leaflet.js.

DELIMaFLIX (Ministry of Education Malaysia)

An official smart digital learning repository platform launched by the Ministry of Education Malaysia (MOE) to provide secure, ad-free educational content for students and teachers.

- Developed and deployed core application features to production environments during initial rollout.
- Executed routine application maintenance, database backup/restoration workflows, and bug resolution.
- Conducted user training sessions and client briefings to streamline onboarding and maintain high platform uptime.

Bakery Ordering System for Sendiri Bake (Final Year Project)

A full-stack e-commerce web application that transitions a bakery business from manual order intake to an automated digital platform.

- Engineered a full-stack web application using Laravel, PHP, and JavaScript to automate manual order processing for Sendiri Bake, accelerating order fulfillment workflows.
- Designed a responsive, intuitive user interface optimized for cross-device compatibility, significantly improving client booking experience and reducing order entry errors.

ACADEMIC AND SUBJECT PROJECTS

- Software Design:** Authored full technical documentation for a "Doctorate Support Group" platform, including System Design Documents (SDD) and System Requirement Specifications (SRS).
- Human-Computer Interaction:** Designed interactive, high-fidelity UI/UX web prototypes for the "Doctorate Support Group" project using Figma.
- Data Science:** Analyzed Kaggle global unemployment datasets and engineered interactive PowerBI dashboards to visualize workforce trends.
- DotNet Programming:** Developed a desktop Book Management System using the .NET framework for digital cataloging and records tracking.
- Computer Networking:** Designed, configured, and simulated SOHO (Small Office/Home Office) and small business network architectures using Cisco Packet Tracer.
- Object-Oriented Programming:** Built a guest house reservation system in Java applying core Object-Oriented Programming (OOP) principles.
- Visual Programming:** Programmed a desktop Tic-Tac-Toe GUI game utilizing Java.
- Algorithm & Programming:** Created a C command-line tool, "Geographical Knowledge," implementing search algorithms to query country and capital dataset records.

EDUCATION

- Bachelor of Computer Science (Software Engineering), UTHM Parit Raja **2021-2024**

SKILLS AND LANGUAGE

Malay	Native speaker	TypeScript	Proficient	PostgreSQL	Proficient
English	Proficient	React	Proficient	Leaflet.js	Proficient
PHP	Proficient	Symfony	Proficient	RESTful APIs	Proficient
Laravel	Proficient	Vue.js	Proficient	Network Security	Proficient
JavaScript	Proficient	MySQL	Proficient	Figma	Proficient
Linux	Proficient	Phyton	Proficient	Microsoft Office	Proficient
Jira/Plane	Proficient	Google Cloud Service	Proficient	AWS	Proficient
